ELECTRONIC DESIGN

semiannual index of articles

July-December, 1966

The articles in each section of this index are grouped under key words, which are intended to indicate the general topic to which the articles refer. The same article may be listed more than once, if its main concern is more than one of these generalized topics.

Careers and Management

BACCALAUREATE: An ill wind blows for the baccalaureate . . . . . EDIT, p. 35, ED 16

CONTRACTS: Learn the basics of contracts . . C&M, p. 100, ED 22

INVENTOR: So you want to be an inventor . . . . . EDIT, p. 64, ED 16

MANAGEMENT: A Manager can't do it all himself—Learn to delegate authority . . . . . C&M, p. 88, ED 24

Who's complaining now . . . and who's listening? EDIT, p. 51, ED 28

STANDARDS: Let's pay more than lip service to matters of life and death . . . . . EDIT, p. 49, ED 21

More standards urged by new organization . . NEWS, p. 14, ED 22

Reduce paperwork on MIL designs with a cross-referenced index . . . . . C&M, p. 92, ED 28

'Zero Defects': More than patriotic back-slapping EDIT, p. 59, ED 29

Circuits and Mathematical Analysis

AMPLIFIERS: Design amplifiers for low noise . . . . . ART, p. 54, ED 25

Diode feedback protection for complementary amplifiers . . . . . IFD, p. 113, ED 22

For higher gain, diode network reduces negative feedback . . . . . IFD, p. 110, ED 28

Hearing aid electronics cured by an M.D. . . . . IFD, p. 86, ED 29

Log IF strips use cascaded ICs . . . . . ART, p. 56, ED 17

Low-impedance bias circuit improves amplifier linearity . . . . . IFD, p. 90, ED 26

Operational amplifier attenuates faster with three added devices . . . . . IFD, p. 104, ED 25

Push-pull output does not change with reference . NASA, p. 92, ED 29

Raise amplifier input impedance by combining FETs and bipolars . . . . . ART, p. 62, ED 29

Stabilize gain in a dc amplifier . . . . . ART, p. 180, ED 19

AMPLIFIERS, cont.:
Tunnel-diode amplifier improves emitter-follower logic . . . IFD, p. 238, ED 19
Want stable audio amplifiers? . . . ART, p. 46, ED 20

COMPARATOR: Universal waveform comparator uses UJT relaxation oscillators . . . IFD, p. 233, ED 19

COMPUTER-AIDED DESIGN: Check design program availability with this listing of computer programs . . . SR, p. 76, ED 23
Computer-AIDED DESIGN: analysis or synthesis? . . NEWS, p. 13, ED 22
Here's a powerful design program using Laplace transform techniques . . . SR, p. 56, ED 23
Light pen to mask via computer . . . NEWS, p. 33, ED 28
Mighty SCEPTRE analyzes any circuit . . . NEWS, p. 21, ED 26
NASA spurs unity in computer-aided design . . . NEWS, p. 17, ED 23
Need a circuit design program? Why not custom-tailor one to fit your needs? . . . SR, p. 70, ED 23
Simplify feedback system design by using a digital computer . . . SR, p. 62, ED 23

CONTROLS: Thyristor triggering is sure-fire . . . ART, p. 38, ED 20
Tunnel diodes trigger thyristors . . . ART, p. 46, ED 17

COUNTERS: Capacitor increases speed of transistorized core counter . . . IFD, p. 110, ED 25
Optical diodes trigger stepping counter . . . IFD, p. 108, ED 25

CURRENT SENSOR: A loss-less current sensor and monitor for less than $1 . . . IFD, p. 86, ED 29

DELAY CIRCUIT: Transformer in delay circuit compensates for attenuation . . . IFD, p. 92, ED 17

DIMMER: Tandem dimmer uses Triac power controllers IFD, p. 70, ED 16

FILTERS: Predict filter response exactly . . . ART, p. 70, ED 29

FLASHERS: Improve flasher designs . . . DD, p. 82, ED 21
Small flasher circuit uses few inexpensive components . . . IFD, p. 104, ED 25

FREQUENCY: Frequency doubler yields rectangular pulse outputs . . . IFD, p. 90, ED 17
Inexpensive active devices yield frequency conversion . . . IFD, p. 84, ED 29
Simple circuit multiplies frequency up to 40 times . IFD, p. 108, ED 28

GENERATORS: Dc-bootstrapped UJT circuit has linear, variable output . . . IFD, p. 68, ED 20
Look beyond the listed specs . . . ART, p. 22, ED 27
Op amp drives capacitor to measure 3-ns-pulse heights . . . IFD, p. 86, ED 21
Square-wave generator uses gate turn-off SCR . . IFD, p. 92, ED 26
Sweep away drift problems . . . ART, p. 34, ED 27
Variable square-wave generator combines IC with 4-layer diode . . . IFD, p. 108, ED 25
What's missing in generator specs? . . . ART, p. 20, ED 27

HEAT CONTROL: Evaluate thermal runaway point of transistor audio output stages . ART, p. 54, ED 28
Infinite heat control uses Triac and contacts . . . IFD, p. 88, ED 17
Thermoelectric module senses its own temperature . IFD, p. 90, ED 17

IMPEDANCE: Convert complex numbers to absolute values and angles graphically ENG DATA, p. 96, ED 23
Impedance diagram simplifies complex load characterization . . . IFD, p. 104, ED 24

INVERTERS: Team saturating chokes with SCRs . . . ART, p. 66, ED 25

LEVEL DETECTOR: Buffered binary affords accuracy and stability . . . IFD, p. 94, ED 17

LOGIC CIRCUIT: Challenge to transistors in logic circuitry . . . NEWS, p. 17, ED 19
Two-transistor exclusive-OR gate needs no external power supply . . . IFD, p. 88, ED 26

LOGIC DESIGN: Take the easy road—use the Karnaugh map . . . ART, p. 64, ED 26

MEASUREMENTS: Passive adapter circuit drives decade scaler . . . IFD, p. 92, ED 21

MODULATORS: FETs in balanced modulators improve linearity and bandwidth . . . IFD, p. 112, ED 28
Self-contained modulator is free of coils, bias supplies IFD, p. 92, ED 21

MOTOR CONTROL: Diode bridge saves wires in motor-reversing systems . . . IFD, p. 106, ED 23

MULTIPLIERS: Analag multiplication and division circuits use log diodes . . . IFD, p. 100, ED 24

MULTIVIBRATORS: Determine a one-shot's period . ART, p. 68, ED 18
Differentiating network ensures astable starting . IFD, p. 74, ED 18
Diodes and capacitor make astable self-starting . . IFD, p. 72, ED 16
Double flip-flop has constant output impedance . . . IFD, p. 102, ED 25
Extra transistor gives Schmitt monostable multi capabilities . . . IFD, p. 65, ED 20
Microcircuit plus capacitor make simple one-shot IFD, p. 106, ED 28
One-shot offers high power and no stand-by current drain . . . IFD, p. 98, ED 24
One-sided flip-flop uses only one SCR . . . . . IFD, p. 106, ED 23
SCR and UJT form noise-immune mono . . . . . IFD, p. 92, ED 26
Synchronized one-shot built with three SCRs . . IFD, p. 110, ED 28

OSCILLATORS: Current-controlled VCO circuit offers linear frequency transfer . . . . IFD, p. 110, ED 22
Don't pay too much for stability in oscillators . . . ART, p. 88, ED 25
Four components stabilize common-base oscillator IFD, p. 94, ED 26
'Kick on' the tank circuit . . . ART, p. 60, ED 18
Phase-shift oscillator cuts cost of VCO . . . . . IFD, p. 106, ED 28
Pulsed oscillator reduces switching transients . . . IFD, p. 100, ED 24
Square-wave generator uses IC NAND gate . . IFD, p. 102, ED 23
Wide-band oscillator needs only one pair of transistors IFD, p. 88, ED 29

POWER AMPLIFIERS: Avoid variable-load problems . . .

.....ART, p. 84, ED 23

POWER SUPPLIES: Try solid-state regulators for your high-voltage dc power supplies ART, p. 76, ED 26

PULSE GENERATORS: Buying a pulse generator? ...ART, p. 12, ED 27
IC and bipolar form compact pulse generator ....IFD, p. 88, ED 21
Linear width-amplifier doesn't attenuate pulses .....IFD, p. 236, ED 19
Produce fast and clean RF pulses .....DD, p. 78, ED 21
Transistor-diode combination improves pulser operation .....IFD, p. 102, ED 23
UJT, bipolars in compact, versatile generator ....IFD, p. 71, ED 18

RAMP GENERATORS: Get ultralinearity from ramps ART, p. 68, ED 28

REGULATORS: Balanced load, tight regulation with SCR-Zener circuit .....IFD, p. 104, ED 23
Shunt circuit smooths power-supply output .....IFD, p. 114, ED 22

RESONATORS: Short-cut to spliced resonators ...ART, p. 62, ED 20

RADAR: Tackle delay-line circuits graphically ...ART, p. 58, ED 26

SWITCHING: Cam-shaft adds contacts to push-button switches ..... IFD, p. 74, ED 16
Cure switching system noise .....ART, p. 186, ED 19
Eliminate switch contact bounce with this simple logic design .....IFD, p. 100, ED 23
FETs make digital switching a snap .....ART, p. 72, ED 25
ICs end the 'driver gap' in FET analog signal switching .....ART, p. 50, ED 26
Resistor cuts saturation voltage of switching transistors .....IFD, p. 106, ED 25
Switch over to field-effects for digital needs .....ART, p. 54, ED 24

TRANSDUCER: Magnetostriction boosts output of strain transducer .....IFD, p. 98, ED 24

TRANSISTORS: Avoid power transistor failure ...ART, p. 52, ED 18
Complementary Darlington: a leading emitter-follower .....IFD, p. 102, ED 24
Cut transistor-replacement costs .....ART, p. 192, ED 19
Try the hybrid-pi ART, p. 66, ED 21

VECTOR ANALYSIS: Simplify vector analysis with a set of nomographs .....ART, p. 82, ED 26

WARNING DEVICE: Transient alarm indicator draws little stand-by current .....IFD, p. 72, ED 18

Communications

ACOUSTICS: Versatile underwater 'voice' .....SR, p. 39, ED 29

AMPLIFIERS: Design amplifiers for low noise ....ART, p. 54, ED 25
Integrated circuit used in FM receiver IF stage .NEWS, p. 14, ED 28
Nomograph gives amplifier noise data ..ENG DATA, p. 60, ED 16
Push-pull output does not change with reference .....NASA, p. 92, ED 29
Simplify IF amplifier design .....ART, p. 38, ED 16

ANTENNA: Doppler VOR antenna reduces RF reflection errors ..... NEWS, p. 30, ED 29

FILTERS: Predict filter response exactly .....ART, p. 70, ED 29

HARMONICS: Suppress harmonics at source .....DD, p. 94, ED 22

HEAT: Evaluate the thermal runaway point of audio output stages .....ART, p. 54, ED 28

IONOSPHERE: Deeper probe of ionosphere due .NEWS, p. 33, ED 25

LASERS: Are lasers practical for communication systems? .....SR, p. 56, ED 22
'On target' laser sought for war communications .....NEWS, p. 14, ED 24
Optics studied for faster space communicating .NEWS, p. 21, Ed 18

MIXERS: Rid mixers of spurious signals .....ART, p. 210, ED 19

MODULATORS: Demodulate the error signal in FM modulators with a differential network .....ART, p. 90, ED 23
FETs in balanced modulators improve linearity and bandwidth .....IFD, p. 112, ED 28
Self-contained modulator is free of coils, bias supplies .....IFD, p. 92, ED 21

OSCILLATORS: Don't pay too much for stability in oscillators .....ART, p. 88, ED 25
Four components stabilize common-base oscillator IFD, p. 94, ED 26
'Kick on' the tank circuit .....ART, p. 60, ED 18
Phase-controlled oscillator has electronic frequency-tuning .....IFD, p. 74, ED 16
Wide-band oscillator needs only one pair of transistors .....IFD, p. 88, ED 29

RADIOS: Airline installs portable radios .....NEWS, p. 14, ED 23

RELIABILITY: Don't gamble on system performance! ..ART, p. 62, ED 28

SATELLITES: Comsat and NASA sign satellite launch accord .....NEWS, p. 13, ED 19
Comsat down, Centaur up—a busy week in space .....NEWS, p. 13, ED 25
Comsat outlines its own R&D program .....NEWS, p. 4, ED 18
Comsat will purchase satellite earth station ....NEWS, p. 14, ED 21
Ford Foundation satellite plan stirs controversy .NEWS, p. 13, ED 21
Pencil-beam communications studied .....NEWS, p. 21, Ed 29

TELETYPE: Navy to communicate on a "moonbeam" .....NEWS, p. 28, ED 21

TELEVISION: Ford and Comsat vie for space .....NEWS, p. 13, ED 19
Small transmitter sends lunar pictures .....NEWS, p. 28, ED 19
Tubeless TV cameras oust vidicon? Not yet. ...NEWS, p. 13, ED 28
Zenith demonstrates laser TV system .....NEWS, p. 14, ED 23

TIME STANDARD: A clearer time beep to be heard in the land .....NEWS, p. 14, ED 18

Components

DIODES: Diode tester offers no risk to components ..IFD, p. 94, ED 17

FILTERS: Improved mechanical filters compete with crystal and LC .....NEWS, p. 33, ED 26

GYROSCOPES: Gimbal-less gyros win NASA backing .....NEWS, p. 22, ED 25
Laser gyroscope measures Navy's roll, pitch and yaw .....NEWS, p. 26, ED 23
Spinning ball—heart of inertial system .....NEWS, p. 20, ED 28

POTENTIOMETERS: Measure potentiometer noise accurately .....ART, p. 78, ED 17
Try low-resistance trimmers .....ART, p. 82, ED 28

RELAYS: Avoid relay misapplication .....ART, p. 76, ED 28
FET amplifier and relay in TO-5 can operate directly off low-level microcircuitry .....PF, p. 188, ED 28

RESISTORS: 'Field plate' nichrome resistors push planar performance .....PF, p. 108, ED 24

TWTs: Accuracy increased in TWT inspection ...NEWS, p. 36, ED 24

Computers and Data Processing

A/D CONVERSION: Shrink costs and size by using off-the-shelf microcircuits .....ART, p. 96, ED 25

A/D SYSTEM has 100-kHz sampling rate .....NEWS, p. 27, ED 17

BINARY DIVISION: Perform binary division fast ..ART, p. 61, ED 17

CLOCK: Precision digital clock uses ICs and a crystal oscillator .....ART, p. 70, ED 26

CONSOLES: Computer consoles roll into office ..NEWS, p. 28, ED 19

CONTROL: Small-scale control computer has all-IC logic, 960-ns cycle time . . . . . PF, p. 126, ED 25

COUNTER: BCD counter uses ICs to minimize component count . . . . . IFD, p. 89, ED 17

DESIGN: Check design program availability . . . . SR, p. 76, ED 23
Computer-aided design: analysis or synthesis? . . NEWS, p. 13, ED 22
Computer-aided design: promise and problems DES DIR, p. 34, ED 20
Here's a powerful design program using Laplace transform techniques . . . . . SR, p. 56, ED 23
Light pen to mask via computer . . . . . NEWS, p. 33, ED 28
NASA spurs unity in computer-aided design . . . . NEWS, p. 17, ED 23
Need a circuit design program? . . . . . SR, p. 70, ED 23
Simplify feedback design by using a digital computer . . . . . SR, p. 62, ED 23
Start your computer design with this comprehensive checklist . . . . . ART, p. 72, ED 24

DIGITAL: Digital computers are no mystery . . . . . ART, p. 86, ED 22
FETs make digital switching a snap . . . . . ART, p. 72, ED 25
Microelectronics opens the gate to faster digital computers . . . . . ART, p. 52, ED 16
Switch over to field effects for digital needs . . . . . ART, p. 54, ED 24

GATE: Two-transistor exclusive-OR gate needs no external power supply . . . . . IFD, p. 88, ED 26

HEWLETT-PACKARD breaks into computer market . . . . . NEWS, p. 13, ED 26

LSI CHIPS away at computer hardware costs . NEWS, p. 17, ED 28

LOGIC CIRCUITRY: Challenge to transistors in logic circuitry . . . . . NEWS, p. 17, ED 19

LOGIC DESIGN: Take the easy road to logic design—use the Karnaugh map . . . . . ART, p. 64, ED 26

MEDICAL: Western Union to study emergency hospital beds . . . . . NEWS, p. 13, ED 22

MEMORIES: Memory process nuts 645 million bits on a square inch . . . . . NEWS, p. 21, ED 28
Microprobe checks tiny magnetic domains . . NEWS, p. 38, ED 28

MILITARY: AF memory unit 'programs' attacks . . . . . NEWS, p. 44, ED 25
IBM announces military/space version of the system/360 . . . . . NEWS, p. 21, ED 25

MOS ARRAYS: High-speed computers to employ MOS arrays . . . . . NEWS, p. 14, ED 21

MULTIVIBRATORS: Determine a one-shot's period . ART, p. 68, ED 18
Differentiating network ensures astable starting . IFD, p. 74, ED 18
Diodes and capacitor make astable self-starting . . IFD, p. 72, ED 16
IC double-gate stabilizes monostable multivibrator . . . . . IFD, p. 70, ED 16

NOISE: Cure switching system noise . . . . . ART, p. 186, ED 19

PASSIVE ADAPTER CIRCUIT drives decade scaler . IFD, p. 92, ED 21

PATTERN RECOGNITION: Computers to read handwritten numbers . . . . . NEWS, p. 33, ED 24

POLLS: Computer to store public opinion polls NEWS, p. 14, ED 22

RAILROAD: Computers help locate railroad freight cars . . . . . NEWS, p. 13, ED 24

SOFTWARE: New time-sharing software announced . . . . . NEWS, p. 14, ED 20

STORAGE: System stores 3200 pages on tiny slide NEWS, p. 30, ED 29

TEACHING AIDS: Computer trainer solves problems, teaches uses . . . . . NEWS, p. 14, ED 26
Pilot steers computer; computer steers jet . . NEWS, p. 23, ED 18

TIMING CIRCUIT: DTL logic NAND gates bring versatility to timing-circuit design . . . ART, p. 74, ED 22

TYPEWRITER: Computer typewriter makes secretary's life easier . . . . . NEWS, p. 27, ED 22

Consumer Electronics

AUTOMOBILES: Electronic 'co-pilot' for drivers tested . . . . . NEWS, p. 26, ED 18
Is there an electric Ford in your future? . . . . . NEWS, p. 13, ED 22
Raysistor-bipolar network protects auto starter . . . IFD, p. 66, ED 20
Sodium-sulfur battery to power electric car . . . . NEWS, p. 13, ED 23

CAMERA stores image on plastic film . . . . . NEWS, p. 28, ED 25

CITIES: Electronic giants plan to build modern cities . . . . . NEWS, p. 13, ED 24

CLOCK: Precision digital clock uses ICs and a crystal oscillator . . . . . ART, p. 70, ED 26

COMPUTERS: Computer to store public opinion polls . . . . . NEWS, p. 14, ED 22
Computer trainer solves problems, teaches uses NEWS, p. 14, ED 26
Computer-typewriter makes secretary's life easier . . . . . NEWS, p. 27, ED 22
Hewlett-Packard breaks into computer market NEWS, p. 13, ED 26
New theme: music on a cathode-ray tube . . . . . NEWS, p. 34, ED 19

FLASHERS: Improve flasher designs . . . . . DD, p. 82, ED 21
Small flasher circuit uses few and inexpensive components . . . . . IFD, p. 104, ED 25

LAW ENFORCEMENT papers sought . . . . . NEWS, p. 26, ED 22

MERCHANT MARINE is in need of help . . . . . EDIT, p. 47, ED 22

MEDICAL: Audio/video system checks into hospitals NEWS, p. 24, ED 23
Hearing aid electronics cured by M.D. . . . . IFD, p. 86, ED 29
New X-ray unit shows 3-D internal views . . . . NEWS, p. 13, ED 23
Robot chemist performs laboratory tests . . . . . NEWS, p. 33, ED 23
Western Union to study emergency hospital beds NEWS, p. 13, ED 22

MODEL-MAKERS race, fly and sail with electronics NEWS, p. 24, ED 28

OIL: Dual magnetometers help search for oil . . . . . NEWS, p. 22, ED 28

Materials

CABLE: New undersea cable uses transistors . . NEWS, p. 23, ED 17

METALS: For metal rips in space, an electron welder NEWS, p. 36, ED 23

WIRING: Press-on circuitry wires auto dashboards . . NEWS, p. 24, ED 22
Strip fine Teflon wire with smooth-jawed pliers . . IFD, p. 86, ED 29

Measurement and Test Equipment

AMPLITUDE MONITOR: Clamp and complementary pair form amplitude monitor . . . . IFD, p. 108, ED 22

ANTENNAS: Circuit tests flex-life of shielded cables . . . . . IFD, p. 110, ED 22

CALIBRATION: Bureau of Standards calibrating peak-pulse instruments . . . . . NEWS, p. 21, ED 28
More standards urged by new organization . . NEWS, p. 14, ED 22

CONVERTER samples CRT signals, acts as scope/recorder interface . . . . . PF, p. 102, ED 21

CURRENT: A lossless current sensor and monitor for less than $1 . . . . . IFD, p. 86, ED 29

CURVE TRACER adapter unit shows FET 'zero-tc point' . . . . . IFD, p. 89, ED 17

DIGITAL METER: Integrating digital meter is 75% ICs . . . . . PF, p. 110, ED 26

DIODE TESTER offers no risk to components . . . . . IFD, p. 94, ED 17

FUNCTION GENERATORS: Mix-and-match modules create function generators . . . . . PF, p. 104, ED 17

GENERATORS: Look beyond the listed specs . . . . ART, p. 22, ED 27
Op amp drives capacitor to measure 3-ns pulse heights . . . . . IFD, p. 86, ED 21
Sweep away drift problems . . . . . ART, p. 34, ED 27
What's missing in generator specs? . . . . . ART, p. 20, ED 27

IC TEST-SET: Economical IC test-set provides gate input/output characteristics . . . . IFD, p. 90, ED 26

LASER PULSES: Disk offers simple means of measuring laser pulses . . . . . IFD, p. 90, ED 21

MICROCIRCUITS: Versatile tester leapfrogs technology . . . . . NEWS, p. 28, ED 22

OSCILLOGRAPH records in a blur of light . . . . . PF, p. 112, ED 29

OSCILLOSCOPE: Digital memory scope plucks obscured signals out of noise . . . . . PF, p. 78,. ED 16

PROBES: Flexible circuit probe fits in small places . IFD, p. 102, ED 25

Microprobe checks tiny magnetic domains . . . . NEWS, p. 38, ED 28

SMOG MONITORS: Automated smog monitors on horizon . . . . . NEWS, p. 17, ED 18

STORAGE: Integrated dual storage system solves synchronization need . . . . . IFD, p. 88, ED 21

TRANSISTORS: Measure transistor y-parameters . . ART, p. 54, ED 20

Second-breakdown testing need not be destructive . IFD, p. 66, ED 20

TWTs: Accuracy increased in TWT inspection . . . NEWS, p. 36, ED 24

ULTRASONICS check on pressure leaks . . . . . NEWS, p. 42, ED 28

Medical Electronics

AUDIOLOGY: Hearing aid electronics cured by MD . . IFD, p. 86, ED 29

CARDIOLOGY: Cantilevered transducer to power pacemaker . . . . . NEWS, p. 14, ED 26

HOSPITALS: Audio/visual system checks into hospitals . . . . . NEWS, p. 24, ED 23

Western Union to study emergency hospital beds NEWS, p. 13, ED 22

RADIOLOGY: New Gatling gun shoots laser beams, not bullets . . . . . NEWS, p. 13, ED 26

New X-ray unit shows 3-D internal views . . . . . NEWS, p. 13, ED 23

RESEARCH: Engineer's black box complements MD's black bag . . . . . EDIT, p. 51, ED 23

Microelectronics

AMPLIFIERS: Log IF strips use cascaded ICs . . . ART, p. 56, ED 17

BCD COUNTER uses ICs to minimize component count IFD, p. 89, ED 17

CLOCK: Precision digital clock uses ICs and a crystal oscillator . . . . . ART, p. 70, ED 26

COMPUTERS: DTL logic NAND gates bring versatility to timing circuit design . . . . . ART, p. 74, ED 22

Microelectronics opens the gate to faster digital computers . . . . . ART, p. 52, ED 16

Shrink A/D conversion costs and size by using off-the-shelf microcircuits . . . . . ART, p. 96, ED 25

Small-scale control computer has all-IC logic, 960-ns time . . . . . PF, p. 126, ED 25

DRIVERS: ICs end the 'driver gap' in FET analog signal switching . . . . . ART, p. 50, ED 26

Integrated low-input, high-output drivers for FET analog switches . . . . . PF, p. 106, ED 26

FLAT PACKS: Adaptor provides plug-in convenience for IC flat packs . . . . . IFD, p. 72, ED 16

GENERATORS: Function generator diffused on a single chip . . . . . NEWS, p. 30, ED 26

Variable square-wave generator combines IC with four-layer diode . . . . . IFD, p. 108, ED 25

INTEGRATED CIRCUITS: Better isolation boosts IC performance . . . . . NEWS, p. 17, ED 21

IC activities filling gap between IF and microwave . . . . . NEWS, p. 21, ED 19

IC yield and adaptive antenna investigated . . . . NEWS, p. 33, ED 22

Reduce circuit size and cost with complex function ICs . . . . . PF, p. 142, ED 25

Researchers push IC performance higher . . . . . NEWS, p. 17, ED 26

LARGE-SCALE INTEGRATION chips away at computer hardware costs . . . . . NEWS, p. 17, ED 28

MARKET: 400 million ICs a year are foreseen by 1971 . . . . . NEWS, p. 14, ED 25

MICRONYM: The quest is on for the perfect micronym . . . . . EDIT, p. 43, ED 17

MODULES: DTL logic modules shrink systems costs . PF, p. 74, ED 20

MULTIVIBRATOR: IC double-gate stabilizes monostable . . . . . IFD, p. 70, ED 16

PULSE GENERATOR: IC and bipolar form compact pulse generator . . . . . IFD, p. 88, ED 21

RECEIVERS: Integrated-circuit flip-chips in small desk-top AM radio . . . . . NEWS, p. 13, ED 20

Integrated circuit used in FM receiver . . . . . NEWS, p. 14, ED 28

RESISTIVITY: Ruby laser process controls resistivity . . . . . NEWS, p. 40, ED 25

TESTING: Economical IC test-set provides gate input/output characteristics . . . . . IFD, p. 90, ED 26

THERMAL PATHS: Don't ignore thermal paths in your integrated-circuit designs . . . . . ART, p. 76, ED 29

THICK FILMS: Make you own thick-film ICs . . . . . ART, p. 52, ED 21

THIN FILMS: Reduce thin-film circuit size with this set of design curves . . . . . ART, p. 64, ED 24

TUNING: 'Resonistor' may tune ICs . . . . . NEWS, p. 33, ED 17

Microwaves

ANTENNAS: Circuit tests flex-life of shielded cables IFD, p. 110, ED 22

Get rid of cross-polarization in edge-shunt slotted array antennas . . . . . ART, p. 86, ED 28

IC yield and adaptive antenna investigated . . . . NEWS, p. 33, ED 22

Microwave tower shows "new look" . . . . . NEWS, p. 27, ED 22

Rubber sheets protect Yagi antenna elements . . . . . IFD, p. 72, ED 18

DELAY LINE: Tackle delay-line circuits graphically ART, p. 58, ED 26

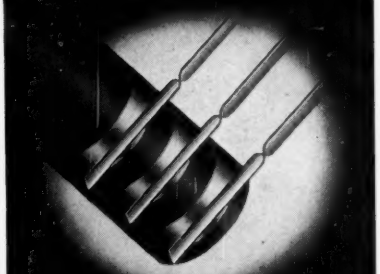
THE END

BRUSHLESS SYNCHROS DON'T HAVE THESE TROUBLE-MAKERS



OR THESE TROUBLES:

Brush wear • Arcing • RFI emission • Contact bounce • Bearing contamination from brush-wear particles • Brush friction error

We left out all these synchro problems by leaving out the brushes. Rotary transformers couple signals into rotors without contact. Result is far longer synchro life — which can exceed 10,000 hours— with performance equal to the best of brush types.

Patented Harowe brushless synchros are available for all common functions, in sizes 5, 8, 10, and 11 as standard; larger sizes as special. All types meet applicable requirements of MIL specs. Request complete data from —

Harowe

Servo, Stepper & Synchronous Motors
Motor Generators • Synchros
Resolvers • Pancakes • Gearheads
